Kepler Actor Tree Model and DropTarget

Dan Higgins - 7/3/2007

LibraryIndex

createLibrary()

builds treemodel from libindex

EntityLibrary
(package - ptolemy.moml)
provides hierarchical library of (MoML) components

EntityTreeModel
package- ptolemy.vergil.tree

extends TreeModel
a treemodel of CompositeEntity objects with NamedObj root

EditorDropTarget
package - ptolemy.vergil.basic

drop() method in inner class DTListener

currently, calls dropObject.exportMoML(name) to get a string and then calls MoMLChangeRequest with string

Changed code must use lsid to get Moml string from ActorCache object
